Selling of materials (80M)

[illegible]

NOTES

NOTES

- All profiles, including aluminum, RAL 9005 matte black (powder coat).
- Sleeve joints: 12 total, 10 M8 A2 bolt, 2 mid-span.
- Anchor: 10 M12 per 200x200x120 HDG steel plate.
- Dimensions in mm. Hidden: Steel channel shown dashed.
- Roof slope 5 deg, drain SW $\rightarrow$ NW.
- ASSUMPTIONS / DEMANDS

Roof load 2100 kg/m² min is a 900kg/m² csgn+PgLn, confirm with supplier (Mg).

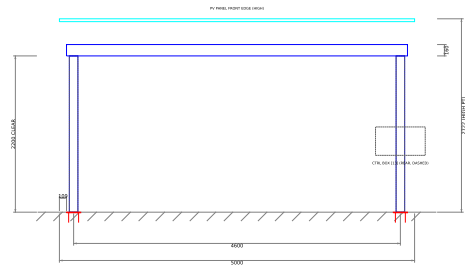

Roof truss/batten beam = 300mm min single channel, ensure it will sit on a 100mmx200 min steel support, if >2000 mm spacing then, 800x200x8 = ok.

1000 single slope created by spaced parallel runtimers above roof beams.

distance 2000 mm supported at the L200 steel edges.

SECTION THROUGH SLEEVE JOINT SCALE: 1:1

- SLEEVE JOINT - NOTES
- Material shown is standard 100mm diameter sleeve & 100mm gap.
 - 100mm gap is standard for all joint details.
 - 100mm gap is standard for all joint details.
 - Joint is made of standard material.
 - Joint is made of standard material.
 - Joint is made of standard material.

ANCHOR - NOTES

1. Plate thickness 10mm, steel S275, min. 10mm galvanized.
2. All anchor bolts - chemical resin (see GCR 08/10/10).
3. Plate embedded in concrete min. 100mm, 10mm galvanized.
4. Fixing min. 100mm (see GCR 08/10/10).
5. Galv. 10mm steel plate, 10mm steel plate (see GCR 08/10/10).
6. Plate embedded concrete (GCR 08/10/10) and 10mm galvanized concrete.
